ADAM D. SMITH

As a Quantitative Ecologist with the United States Fish & Wildlife Service Inventory and Monitoring Program, I provide ecological inventory and monitoring design and analytical assistance to the roughly 130 National Wildlife Refuges. In addition, I engage in diverse partnerships with conservation and resource management agencies and organizations to support a research program built around modern quantitative tools and approaches to understand the ecology and conservation of migratory animals. Most of my active projects are collaborative and integrate digitally-coded telemetry or GPS logging technology to answer landscape and local scale questions relevant to conservation and management. I am an open science advocate.

2019 | 2015

Quantitative Ecologist

U.S. Fish and Wildlife Service

- Athens, GA
- Provide ecological, design, and analytical assistance to southeastern National Wildlife Refuges
- Build statistical models relevant to ecological research (e.g., occupancy models, hierarchical models)
- Develop methodologies and tools (e.g., R packages) that facilitate the synthesis and analysis of ecological data.
- Coordinate installation and maintenance of automated telemetry stations as part of the Motus Wildlife Tracking network

2019

Contract analyst

Birds Canada

Athens, GA

• Provide visualization and analytical support for Red Knot movement data

Last updated: 2019-12-12.

2015

Postdoctoral Fellow

University of Rhode Island

♥ Kingston, RI

- 2013
- · Described spatiotemporal variation in the behavior and abundance of sea ducks in southern New England and developed novel statistical methodologies to predict animal distribution and abundance relative to environmental
- · Studied post-breeding and migratory movement ecology of migratory birds using automated telemetry

2008

Research Associate

University of Florida

• Generated probabilistic (Bayesian) models of songbird resource use based on the isotopic composition of avian tissues and potential food resources to document the extent of community-level diet shifts and the seasonal importance of different food resources to migratory songbirds

2007 2005

Avian Research Technician II/III

Kentucky Department of Fish and Wildlife Resources

Frankfort, KY

• Coordinated and implemented statewide Bald Eagle and Peregrine Falcon monitoring, two Monitoring Avian Productivity and Survivorship (MAPS) banding stations, migratory songbird banding, winter raptor surveys, and songbird banding training for staff and cooperators
